Senior Full Stack Engineer — Enterprise Platforms & AI Integration

React.js · TypeScript · Node.js · Python / FastAPI · PHP · REST API Integration · Application Security

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 7 years building enterprise web platforms in React, TypeScript, Node.js, Python/FastAPI and PHP across workflow automation, procurement, and logistics. Currently designing and shipping an internal AI gateway that gives 100+ employees governed access to LLMs through a two-layer data loss prevention pipeline, Entra ID SSO, and full audit logging. Earlier work includes 20+ carrier and marketplace API integrations and Node.js performance engineering. MTech in Information Security with published cryptography research, applied directly to production security tooling.

PROFESSIONAL EXPERIENCE

AI Rashed Holdings — Ardiya, Kuwait

Senior Full Stack Developer | Sep 2025 – Present

- Architected and built an internal AI gateway (FastAPI, React.js, PostgreSQL, Redis, Docker) giving **100+** employees across **7** departments governed access to OpenAI, Anthropic and Groq models, replacing unmonitored public AI usage with an auditable, policy-controlled channel.
- Engineered a two-layer DLP pipeline (Microsoft Presidio + LLM classifier) screening **700+** prompts and file uploads per day across 19 detection categories, with Entra ID SSO, department-level policy enforcement, RBAC, and real-time admin alerting on flagged content.
- Delivered a MERN ticket management platform across IT, business, and procurement teams, consolidating 3 previously separate request workflows and handling **250+** tickets per month for **100+** users.
- Automated 4 procurement stages — material requests, purchase orders, invoice handling, and ticket closure — cutting approval cycle time from **4 days** to **5 hours** and removing **4** manual handoffs per request.
- Built a sales analytics dashboard (React.js, TypeScript, Node.js, Express.js, Microsoft SQL Server) over the ERP database, delivering real-time KPIs, salesman performance tracking, and margin analysis through 12+ interactive charts.
- Automated build and deployment of Dockerized services to on-prem Linux servers using **GitHub Actions**, with pytest, Jest, and Postman collections covering unit, integration, and API regression testing.
- Rebuilt the corporate website as a server-rendered Express/EJS/PostgreSQL application (20+ pages) on a normalized ~17-table schema with transactional migrations, plus a config-driven admin CMS generating full CRUD for 13 content types from a single schema file.
- Containerized the platform with a multi-stage Docker build and automated Fly.io deployments through GitHub Actions, securing it with bcrypt session auth, a Postgres-backed session store, and parameterized SQL throughout.

Phoenix Biz Solutions — Thane, India

Web Developer (Full Stack Developer) | Aug 2022 – Aug 2025

- Built and maintained an ERP-style logistics and e-commerce platform (CakePHP, MongoDB, MySQL) handling marketplace product synchronization, order processing, and multi-carrier shipping for **10+** merchants and **100+** orders per day.
- Delivered **20+** third-party integrations spanning carrier (APG, CTExpress, Posteltaliane) and marketplace (Rakuten, Joom, eBay) APIs, implementing retry, rate-limit, and idempotency handling that cut sync run time by 25%.
- Built dmstrack.com, a shipment tracking platform surfacing live status across 3,500+ carriers through aggregator integration, tracking **500+** shipments per month and reducing manual status inquiries.
- Cut API response times ~50% (from **160ms** to **80ms**) across multiple Node.js services by **caching, query optimization and async processing**.

myMRPlace — Thane, India

Full Stack Developer / Sep 2019 – Jul 2022

- Built and maintained mymrplace.com (CodeIgniter, MySQL), a B2B platform connecting buyers and suppliers in the market research industry, supporting **100+** registered suppliers and international research operations.
- Reduced page load time 20% by refactoring MySQL queries — indexing, eliminating N+1 queries, and query restructuring — across the platform's core supplier-matching flows.
- Served as Scrum Master for a **7**-person cross-functional team across **80+** sprints, running ceremonies, backlog prioritization, and release coordination alongside a full development workload.
- Built and maintained Bitbucket CI/CD pipelines to automate deployments from repository to testing and production servers, with JIRA-linked branches and tickets tracking each release.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, PHP, SQL, HTML5, CSS3

Frontend: React.js, React Router, Bootstrap, responsive UI development

Backend: Node.js, Express.js, FastAPI, CakePHP, CodeIgniter, REST API design & integration, EJS, server-side rendering (SSR), MVC, JSON

Databases: MySQL, MongoDB, PostgreSQL, Microsoft SQL Server, Redis, schema design, database migrations, connection pooling, database optimization

AI & Security: OpenAI / Anthropic / Groq APIs, LLM application integration, Microsoft Presidio, data loss prevention, Microsoft Entra ID (Azure AD) SSO, OAuth 2.0, RBAC, audit logging, OWASP Top 10

Cloud & DevOps: Docker, AWS (EC2, S3, SQS, SES), Linux server administration, Git, Bitbucket, GitHub Actions, Fly.io, continuous integration / continuous deployment (CI/CD)

Platforms & Tools: Zoho Creator, Zoho Catalyst, JIRA, WordPress

Domains: Enterprise workflow automation, procurement systems, logistics & carrier integration, marketplace synchronization, AI governance

Methodologies: Agile, Scrum, sprint planning, cross-functional collaboration

PROJECTS

AI Code Reviewer — MERN + Google Gemini 2.0 Flash / Dec 2024 – Feb 2025

- MERN application integrating Google Gemini 2.0 Flash to analyze source code and generate structured improvement suggestions, automating first-pass code quality review.

EDUCATION

Master of Technology (MTech), Information Security — K. J. Somaiya College of Engineering, Mumbai / 2023 – 2025

Bachelor of Engineering (B.E.), Computer Engineering — Dilkap Research Institute of Engineering and Technology / 2016 – 2019

CERTIFICATIONS

- [Claude Code 101 — Claude Academy](#)
- [Architecting Solutions on AWS — Coursera](#)
- [Scrum Certification — Udemy](#)
- [DevOps Fundamentals — Udemy](#)

PUBLICATIONS

Design & implementation of a secure QR payment system using Visual Cryptography — 10th International Conference on ICT for Sustainable Development (ICT4SD 2025), Springer Nature Proceedings, Vol. 4. Presented in person.
